

- **Border** is the line that's drawn around each edge of the box. You can have a border around all 4 sides, a single side, or any combination of sides.
- **Background-color** fills the space inside the border.
- **Padding** is the space between the content and the content's border. Padding is additive. Padding is found **inside the box** created by the border.
- **Margin** is what separates one tag from another. Margins are collapsible, not additive. Margin is what is found **outside the box** created by the border. It separates elements from nearby elements and the browser window.
